

ALKON 50-70.

Unical

# The control panel

## Innovative functions simple to use

The ALKON is a versatile boiler. Particular care has been given to the flexibility of the controls. The control panel is equipped with an alphanumeric display with 6 pre-selection keys, which enable the user to view the following information:

- 1. Boiler operation**
  - Boiler status; flow and return temperature
  - Error code
- 2. User's parameters**
  - Working temperature setting
  - On/off central heating
- 3. Service parameters**
  - Maximum working temperature setting
  - Thermostat

- Pump overrun time
- Fan ignition speed

#### 4. Data readout

- Global flow and return temperature

But the possibilities do not finish here. Infact, using the dedicated E8 heating controller, the control and command functions are reinforced and extended to the sequence control of multiple boiler installations and remote management\* of every possible configuration.

Temperature increase key

Reset key/Error code display

DHW set key

Central heating adjustment key

Temperature decrease key

CH selection key:  
Stand-by/Central heating
